

Henrik C. Wegeners tale ved overrækkelsen af Sonningprisen

Taler

Henrik Caspar Wegener
Rektor ved Københavns
Universitet

Dato

19. april 2024

Sted

Festsalen på Københavns
Universitet

Omstændigheder

Sonningprisen 2023 blev overrakt til Marina Abramović fredag den 19. april i Festsalen på Københavns Universitet med et års forsinkelse, da pristageren blev ramt af en blodprop sidste år. Sonningprisen, stiftet af forfatter og redaktør C.J. Sonning (1879-1937), er Danmarks største kulturpris.

1 Dear Marina Abramovic

Dear colleagues and friends of the university

5

Last year we had to postpone this event on short notice;

and we were deeply worried about your health.

10

Now we are even more delighted to welcome you.

15 Let me take you on a journey to the past.

The place is a dark forest near Ringsted in Southern Zealand.

20

The year is 1985.

A group of Danish art school students are gathered.

25 They take part in an experiment under the supervision of Marina Abramovic.

The students are blindfolded.

Marina takes them deep into the forest – and gives them the following task:

30

“Please return to the teaching facility within an hour”.

35

One student ends up in a swamp and sits there for hours.

Another gets himself into a residential area.

40

Local residents see this blindfolded man in funny clothes in their front yard

– and they call the police.

45 The next day, the local newspaper reported:

“It turned out to be an artist who was learning something

– what the artist learned remains unclear.”

50

Some of the students are present here today.

55 And I should add that they all returned without sustaining lasting mental or physical injuries.

60 As opposed to the newspaper, I think the purpose of the “exercise” is perfectly clear – especially here at the university.

The Abramovic Method bears resemblance to the conduct of basic research,

65 which is driven by open-minded curiosity, not predictable outcomes.

Sometimes you only discover what you were looking for – afterwards.

70

It is the experimental method of “I wonder what happens if...”

75 “What happens if” you sit in a chair at MOMA together with strangers

for 3 months – day in, day out?

80

“What happens if” museum guests have to squeeze past two naked persons when entering a room?

85

This method does not only apply to art – but certainly also to science.

90 What happens if two molecules suddenly click?

Morten Meldal – our most recent Nobel Prize winner –

wondered why and discovered click chemistry.

95

What happens if a fungus apparently wrecks a sample in the lab?

100 Alexander Fleming wondered why – and discovered antibiotics.

105 If we are allowed to wonder – wonders will happen.

In an interview, Marina Abramovic said:

110

“The space from which artists derive their inspiration

is the same space from which scientists or philosophers derive inspiration;

115 there is no other space.”

Marina Abramovic is spot on.

120

We need to protect and expand this creative space from which art, science,
ideas, curiosity – and indeed life - flow.

125

There are those who consider basic research as an activity reserved for the few.

130 The fabulous few in the league of Nobel or Sonning

– like Abramovic and Meldal.

135

This conception is fundamentally flawed.

140 Any researcher should have access to this creative space.

145 Otherwise, the future Hans Christian Ørsted [who looks gracefully down on
us]

will not discover electromagnetism – but simply improve the candlelight.

150

But I would go even further.

155 The Abramovic method also concerns being a university student.

Education is not just the simple transmission of skills aimed at a fixed purpose
160 or job.

Being a student is learning how to learn.

A way of thinking independently

165

And not always sticking to the assembly manual.

A method that will enable you to manage almost any problem

170 you will encounter in life.

However, I will advise our new students not to act as an Abramovic the first
week - or year - of their bachelor's programme.

175

That experience will be as frustrating as when you deviate from the assembly
manual of an Ikea cupboard.

180

But towards the end of the Master's degree

185 – as they research and write their thesis –

all students should have access to the creative space of the Abramovic Method.

190 It requires time, in-depth thinking and the freedom to develop and pursue truly original ideas.

Dear Marina Abramovic:

195

Your works have pushed the boundaries of human thinking

– and made us all wonder.

200 And if we are allowed to wonder – wonders will happen.

205 It's a pleasure now to introduce the person who proposed Marina Abramovic as recipient of Denmark's paramount cultural award:

Minister in the Church of Vartov and lecturer at our Faculty of Theology

Jesper Tang Nielsen – the floor is yours.
