1 Dear new students. Welcome to the University of Copenhagen!

5

You may wonder: Why is this Rector speaking in English
and not in Danish?

10

I can give you 2000 good reasons:

That's the number of new international students at the university.

15

Some of you are here today: Where are you? Let me hear you!

20

We have students from Cape Town, Canberra, Kyoto, Køge and Kokkedal.

And we have students from Kyiv in Ukraine,

25

including biology students Margarita and Daria who came to the University
through the #science-for-Ukraine initiative.

I'm pleased and proud that Margarita and Daria are with us today.

30

Each and every one of you are now citizens of the same university.

35

This is your new home country.

A republic of science.

40 A Kingdom of education. Welcome!

45

In a moment, I will introduce you to the faculties of the university.

Some of them discover the world by reading books.

50 Others travel to the end of the world

and dig in the soil after long gone species or civilizations.

And some prefer to crunch data and make the world fit into a spreadsheet.

55

60 As you can hear, this is a poor attempt to make the great university fit into a few stereotypes.

My point is that we may be different, but we are *all* united in the wonderful diversity of a comprehensive University.

Out of many – we are one.

”E pluribus unum”

70

75 So – according to the old ceremonial order:

80

Allow me to present the Faculty of Theology

and Dean Carsten Selch Jensen.

85 Give him and the faculty a big cheer!

From the very beginning in 1479, the Faculty of Theology has educated priests.

90

Next is the Faculty of Law and Dean Jacob Graff Nielsen.

95 Did you know that the Faculty of Law has educated the most Prime Ministers
in Denmark since 1900 – and that’s 10.

100

Not only does the next faculty produce many civil servants.

105 It also has the most students who start their own business.

Here's the Faculty of Social Sciences and Dean Mikkel Vedby Rasmussen.

Now to the faculty with the highest number of Nobel Prizes

110

– and that's five.

The Faculty of Health and Medical Sciences
and Dean Bente Stallknecht.

115

120 Now, give a big cheer to the Faculty of Humanities

and Dean Kirsten Busch Nielsen.

Did you know that the Faculty of Humanities is the faculty where women first
125 became the majority among students.

Finally, the faculty with researchers and staff from the most countries – and
130 that's 83 countries:

The Faculty of Science and Dean Katrine Krogh Andersen.

135

Last but not least, the people who help govern our university

in keeping with the spirit of academia.

140

May the force be with you!

Prorector for Education, Kristian Cedervall Lautau

145

Prorector for Research David Dreyer Lassen

and University Director Jesper Olesen.

150

Please remember to visit the stalls in the courtyard,
where the deans will be serving cakes for free. Yummy!

155

This is a day of hope, joy ...and free cakes.

160

I don't mean to steal your appetite for happiness.

But I guess some of you have arrived not only with a feeling of joy

– but also with a feeling of confusion and maybe even concern.

165

170

Some of you have just moved to Copenhagen

– and still rely on Google Maps to find your way to Frue Plads.

Some of you are still looking for a place to stay

175

with a rent you can actually pay.

180

Others enjoy the privilege of a parent-paid apartment in Vesterbro

185 – which costs pretty much the same as a medium-sized castle in other parts of
the country.

Regardless of how much money you have in the bank,

190 everyone has a social deficit today.

It would be strange *not* to feel alone in this crowd of 3000 strangers.

I'm afraid there's more.

195

You also carry the heavy burden of expectations.

The politicians expect you to get a job and become a taxpayer before you turn
25.

200

Instagram and Snapchat expect more than any human being can deliver:

Endless pictures from friends always partying and always posing with colorful
cocktails and big smiles.

205

210 I'm afraid there's more.

You have barely escaped the Corona prison

– and the harsh sentence of two years in isolation.

215

What awaits you in freedom?

War in Ukraine.

220 War on European soil.

The fear of nuclear war.

225 Prices on the two big G's – gas and groceries – are going through the roof.

Sunflower oil and coffee are promoted from ordinary shopping items to luxury goods.

230

I am afraid there's more.

235

Yet another progress report from the UN Climate Panel with little or no progress.

This summer even London felt like being inside a pizza oven.

240

From the Loire to the Donau – the rivers of European civilization have dried out and feel like walking on concrete.

In the Amazonas, the rainforest is destroyed at a rate of three football fields every minute.

245

Animals and plants vanishing from the face of the earth.

I called customer service at Mother Nature – the species are permanently out of stock.

250

Dear friends of the earth.

Dear friends of the university:

255

We need a turning point to prevent a tipping point.

I guess now is the time in my speech to offer hope, comfort and relief

265 ...

And I will.

270

I know a place that drives the power of new sustainable energy.

275 I know a place that can empower a sustainable mindset.

I know a place that can plant the seeds of sustainable food.

280 I know a place that educates citizens, fosters democracy and promotes the peaceful resolution of conflicts.

And I know a place that can bark as a watchdog, when the people in power fail to protect the people and the planet.

285

It's a place called university.

290

And dear students – today you have come to the right place!

Some might say that I'm not really in a position to give *you* advice about your future.

295

After all, it was my generation of kamikaze consumers that made a mess of the planet in the first place.

300

Still, I dare give you some advice. Here it comes.

305

310 First, be patient.

Show up for the lectures or lab exercises.

Expect many hours of lonely deskwork.

315

It will remind you of your time in the Corona prison.

Do *not* expect books in academic English to have won an Oscar for reader-friendliness.

320

Don't worry – the person standing next to you won't have a clue either – even if she looks cool and confident.

325

Be patient – you will crack the code of academic learning.

330 Eventually, studying will give you a Netflix sensation of suspense
and an urge to binge the next episode.

335

Secondly, don't pretend to be perfect.

340

This year, the university celebrates that Niels Bohr received the Nobel prize 100 years ago in 1922.

345

Bohr did not wake up one morning to present his revolutionary model of the atom out of the blue - and before his first cup of coffee.

In Bohr's view, a scientist is a person who has made the maximum number of mistakes in the smallest possible space.

350

It's the method of not being afraid of mistakes but to learn from them.

I very much encourage you follow Bohr's example.

Make mistakes and learn from them.

355

360

But more than anything, I encourage you to help each other.

The secret of getting through your degree

is not only to hang in and work hard alone

365

- but also to hang out and work, together.

Have coffee on campus, together.

370

Play ball in the park, together.

Arrange a movie night or a yoga morning, together.

Climb the mountains of knowledge, together.

375

Discuss the climate and how to reach a turning point

to prevent a tipping point, together.

380

Finally, I will bring you back to the outset.

The medieval university from 1479.

385

The ceremony of matriculation means that you become citizens of the independent academic republic of the university.

390

It's the custom that students shake hands with the Rector.

395

By performing this ritual, you say that you will obey the ancient laws of the university.

Some of the old rules are about respecting the old professors and doing as you are told as polite and well-behaved students.

400

But perhaps it's more suitable if the handshake today will mean something else.

405

That you will acquire the knowledge to help solve current and future problems of our planet:

410

Armed conflicts, the climate, poverty, pandemics and other unexpected catastrophes.

415

Prorector for education, Kristian Cedervall Laut, will lend me a hand as we shake hands with all of you after we have enjoyed some more music.

420 As it happens, Kristian is also a professor of disaster law.

I'm afraid Kristian's research field will never be out-of-date.

425

But I'm confident that you – the new students of 2022 –

430 will make the world a better place.

And please remember to take good care of each other

as you climb the stairs of the university, together.

435

440 Welcome to the University of Copenhagen!
